

Project Documentation: TypoBaazi

Project Overview

The TypoBaazi project is a web-based application designed to enhance users' typing speed and provide them results there is also a game mode named Air typing where Players are presented with the falling words that they have to type it before it hit the ground.

Project Architecture

The project is built using HTML, CSS, and JavaScript, ensuring a lightweight and responsive web application. The front-end handles the user interface and interactions, while JavaScript manages the game logic, including word randomization, score calculation, and page reloading for restarting the game. Key components include the game area, score counter, input field, and control buttons, all dynamically manipulated through DOM operations to provide a seamless gaming experience.

How to run

Step 1:

- To initialize this project go to the src folder and open TypoBaazi.html file.
path: TypoBaazi\src\TypoBaazi.html
